

The following table is a guide to selecting a suitable child restraint.

<h2 style="text-align: center;">A guide to child restraints</h2> <p style="text-align: center;">It is now the law for all children under seven years old to be correctly restrained according to their age and weight/height.</p>			
Age	New Standard AS/NZS 1754:2010	Previous Standard* (Indicative weight)	Child restraint
0–6 months	If your child has reached this age, they should still use the appropriate restraint until their shoulders reach the upper shoulder height marker.	Less than 8 kg	Rearward facing baby capsule or infant restraint 
6 months–1 year	If your child has reached this age, they should still use the appropriate restraint until their shoulders reach the upper shoulder height marker.	8–12 kg	Rearward or forward facing infant restraint 
6 months–4 years	If your child has reached this age, they should still use the appropriate restraint until their shoulders reach the upper shoulder height marker.	8–18 kg	Forward facing child restraint with built-in harness 
4–7 years	If your child has reached this age, they should still use the appropriate restraint until their shoulders reach the upper shoulder height marker.	14–26 kg	Booster seat with lap-sash H-harness or a booster seat with a secured adult seatbelt
